

Monitoring

Content

Monitoring

In order to have an overview of events that are handled in the Integration Platform, like dossier creations and updates, a new monitoring user interface is developed. **The access to it is restricted to a small set of existing PCSIP users. If you would like to monitor your tests, please refer to PCS Support (support.pcs@rne.eu) to provide you with the access to the monitoring tool. The link can be found in the reference list [4].**

Users can filter among their operations by:

- Entering the particular dossier id
- Selecting from date
- Selecting to date
- Selecting the particular web-service operation from the list:
 - updateOperationPoint
 - createSingleDossier
 - updateDossierRUIMPair
 - updateCatalog
 - makeObservation
 - updatePath
 - updatePathSection
 - updateDossierStatus
 - createSubsidiary
 - updateProgressStatus
- Selecting the status of the result from a list:
 - Success
 - Failed

Mediation Protocol
