

## Dossier types

### ▼ [Content](#)

The Dossier type classifies a dossier. The following Dossier types are implemented in PCS:

- **Default:** This dossier type is the default settings in the system when creating a new dossier. You can change this default setting if you need another type.
- **Change:** A change means a changed dossier from the previous year's timetable.
- **Fault:** The dossier with this type will not be promoted to the next phases! The Applicants and IMs can use this type in order to show that the dossier has a wrong input which cannot be used for further processing.
- **Status quo:** A "Status quo" dossier refers to a dossier from the previous timetable period which is requested again in the same form.
- **Change to the current timetable:** This Dossier type is for changes/modifications to existing paths in the current timetable year.
