

Phase Path Elaboration (PaP)

Content

This is the first phase for pre-arranged path process. C-OSS starts the creation of completely new PaPs in PaP manager wizard. If C-OSS creates PaP via import, this phase is treated as a milestone and dossier is immediately promoted to the next phase Path Elaboration (PaP).

Rights: Read and write access have only the C-OSS, who creates. Involved IMs have only read access.

Object: Basic data should be recorded. There should be a defined type of PaP, locations, and parameters.

Control: When C-OSS saves in PaP draft in PaP manager, the dossier is automatically promoted to Path Elaboration (PaP) phase.
